

Basic

Basic + Diagnostics

Complex

*Calibration time
varying parameters
(Start to end of observed ts)*

*Input: raw data; literature pars; user input
Process/generating tv-pars script
Output: calibration time varying data frame;
plot; fitted objects*

*Forecast time
varying parameters
(Beyond end of observed ts)*

*Input: user input; fitted objects
Process forecasting tv-pars script
Output: forecast time varying data frame*

Observed Time
Series Data

Input: raw data (TS or Line list)
data process script
Output: Processed TS; plot

Calibration

(Start to end of observed ts)

Input: Observed time series, model
definition, *time varying params*
Calibration script
Output: Calibrated object; parameter
estimates

Forecast

(Beyond end of observed ts)

Input: Calibrated object, *time varying params*
Forecast script
Output: Forecast TS of all boxes; plot

Calibration Diagnostics

Input: Calibrated object
Diagnostic script
Output: Summary; diagnostic plot
